

VEEP/NHEEP equipment sanitation protocols for teachers:

- To sanitize equipment between uses by your students/classes, place a small amount of disinfectant spray onto a paper towel to wipe all handles and areas where students have handled the equipment.
- DO NOT spray disinfectant directly onto electrical equipment and use caution with excessive moisture. Moisture build up within the internal compartments can lead to equipment failure.
- Equipment in limited supply, that was previously handled by students in station work, will now likely need to be demonstrated by a teacher in order to avoid sharing these pieces of equipment.
- Please do not sanitize items before sending back to VEEP.
